Jordan Reyes

Data Analyst (fictional) · Code 9911.2 · fictional person for demos · no real PII

Summary

Data analyst supporting shipyard maintenance planning. Builds Power BI dashboards and SQL pipelines that turn work-package data into decisions. Comfortable explaining numbers to non-technical leads.

Experience

Data Analyst — Maintenance Planning Division (fictional), 2022–present

- Designed SQL pipelines in SQL Server to consolidate work package readiness data from three legacy systems; cut weekly reporting prep from 6 hours to 40 minutes.
- Built Power BI dashboards tracking maintenance coordination milestones; defined metrics with branch heads and documented every metric definition.
- Performed statistical analysis of schedule slips (Python, pandas) and presented data storytelling briefs to division leadership.
- Led data quality checks and a data governance working group for planner-entered fields.

Junior Analyst — Fleet Sustainment Office (fictional), 2020–2022

- Exploratory analysis of parts lead-time data; forecasting of demand for long-lead items.
- Automated recurring Excel reports with PowerShell scripts.

Skills

SQL, Power BI, Python (pandas), data visualization, statistical analysis, forecasting, metrics definition, data quality, PowerShell, Git

Certifications

- CompTIA Data+ (2023)
- Microsoft Certified: Power BI Data Analyst Associate (PL-300), renews 2027

Education

B.S. Applied Mathematics, State University (fictional), 2020
