Priya Natarajan

Data Engineer (fictional) · Code 9911.2 · fictional person for demos · no real PII

Summary

Data engineer who owns ETL/ELT pipelines and the data model behind the division's analytics. Strong on database design, data integration and streaming data; mentors analysts on SQL.

Experience

Data Engineer — Analytics Branch (fictional), 2021–present

- Designed and maintained ETL / ELT pipelines (Python, Azure Data Factory) feeding a governed warehouse; data modeling in a star schema with documented lineage.
- Implemented streaming data ingestion from shop-floor sensors with Kafka; built data quality monitors and alerting.
- Database design and tuning for PostgreSQL and SQL Server; wrote the team's data governance standards.
- Infrastructure as code (Terraform) for the analytics environment in AWS; cost optimization reviews each quarter.
- Knowledge transfer: ran monthly SQL clinics and cross-training for planners.

Software Developer — Logistics Systems (fictional), 2018–2021

- Python development for data integration services; REST API design; CI/CD pipelines with GitHub Actions.
- Container platforms (Docker, Kubernetes) for batch jobs.

Skills

Python, SQL, ETL/ELT, data modeling, database design, Kafka, Terraform, AWS, Docker, Kubernetes, CI/CD, data governance, knowledge transfer

Certifications

- AWS Certified Data Engineer – Associate (2024)
- Terraform Associate (2023)

Education

M.S. Computer Science, Tech Institute (fictional), 2018
