Marcus Bell

Software Developer (fictional) · Code 1513.3 · fictional person for Synapse demos · no real PII

Summary

Full-stack developer building internal tools for shipyard process mapping and work instructions. TypeScript on the front end, Python services behind it, and a habit of leaving code reviews better than he found them.

Experience

Software Developer — Digital Tools Branch (fictional), 2021–present

- Frontend engineering in React and TypeScript for a technical work instructions viewer used by 400 planners.
- Backend services in Python (FastAPI) with API design reviewed against the enterprise standard; application architecture documentation.
- Established code reviews and Git workflows (trunk-based, protected branches) across three teams.
- Test automation with Playwright and regression testing in CI/CD (Azure Pipelines).
- Agile facilitation: rotating scrum master for a six-person team.

Developer Intern — University IT (fictional), 2020

- JavaScript development and rapid prototyping of a room-booking app.

Skills

TypeScript, JavaScript, React, Python, FastAPI, REST API design, Git, GitHub, code review, Playwright, test automation, CI/CD, Azure Pipelines, Scrum

Certifications

- Certified ScrumMaster (CSM), Scrum Alliance, 2022
- Pursuing AWS Solutions Architect – Associate

Education

B.S. Computer Science, Coastal University (fictional), 2021
